

## PragmaDev introduces a free version of its set of tools.

Paris - France - November 28<sup>th</sup>, 2016 - PragmaDev launches *PragmaDev Studio* V5.1 introducing a freemium licensing model. The whole tool set is now available for free for small projects. This will ease evaluation, education and adoption of our modeling technology.

This new version comes with almost a 100 new features. Among the main ones are:

- **A new freemium licensing model**  
PragmaDev Studio is now available for free for small projects.
- **Automatic non regression testing**  
The automatic non regression testing feature will automatically re-execute the previous scenarios on the new version of the system. If any discrepancy is detected the difference between the expected scenario is graphically displayed. This feature will speed up iterations in an agile process.
- **New TTCN-3 editor**  
As TTCN-3 is a textual language, easy navigation within the declarations will help productivity. The new text editor can easily browse from a test case to a template definition and to the type on which the template is based.
- **New widget in the prototyping GUI**  
A new Text entry widget is introduced in the prototyping GUI. The user can type in a value that can be used to interact with the simulated system. This is a step forward to ease interaction with the simulated system.
- **Built in library**  
A built in library now allows to manipulate files and to generate radar graph from within the Specifier model or the Tester test case.

### About PragmaDev

*PragmaDev* is a privately held company based in Paris France that provides since 2001 a set of model driven tools dedicated to the development and test of communicating systems: PragmaDev customers include Airbus, Alcatel-Lucent, Renault, the French Army, Wipro, ST-Microelectronics, Korean Telecom, the European Space Agency, Toshiba, and LG Electronics.
